Oral Transmucosal Fentanyl Citrate (OTFC) Lozenge,

therapy for their underlying persistent cancer pain. (1)

Healthcare professionals who prescribe OTFC on an outpatient basis must enroll in the TIRF REMS Access program and

who are knowledgeable of and skilled in the use of Schedule II opioids to treat cancer pain.

Patients must remain on around-the-clock opioids when taking OTFC.

• 

RESPIRATORY DEPRESSION

• 

ABUSE POTENTIAL

Due to the risk of fatal respiratory depression, OTFC
